Radio Gate Complete Portal Solution

*Radio Gate Portal solution wraps an organization's documents and applications **in a single web interface** that provides **distributed access cross-platform usability, personalization & management.***

Typical Portal Infrastructure with Channels & Channel Controls

Personalization

A portal will display different views of organizational data based upon user groups. Individual users will be able to further customize their view to only display the content they use most often.

Categorization of Content

A portal will allow you to organize content and applications in different ways in order to meet the needs of various groups within your organization.

Content Management

A portal will provide content authoring systems that allow non-technical staff to create content. It will control access to content to allow only authorized users access to document repositories.

Experience you can count on!

Radio Gate has **extensive** experience deploying **Portal Solutions** for **Fortune 500 Companies.**
